

THE WOODS WE USE

The images below are only representative of colour and appearance of the wood and wood grain.

Common Name: Australian Blackbutt
Scientific Name: Eucalyptus Pilularis
Distribution: New South Wales and southern Queensland
Colour/Appearance: The heartwood ranges from golden yellow to pale brown, although occasionally a slight pinkish colour may be present. Blackbutt has an even texture and generally straight grain.

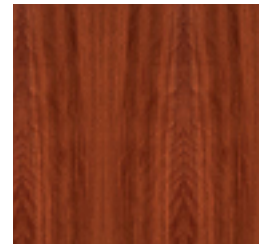

Common Name: Australian Blackwood
Scientific Name: Acacia melanoxylon
Distribution: Native to Tasmania & Eastern Australia
Colour/Appearance: Colour can be highly variable, from medium golden to reddish brown, similar to Koa or Mahogany. There are usually contrasting bands of colour in the growth rings, and it is not uncommon to see boards with ribbon like streaks of colour.

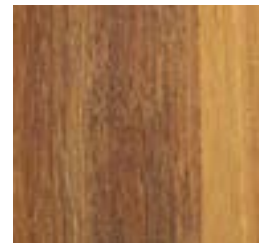

Common Name: Australian Ironbark
Scientific Name: Eucalyptus sideroxylon
Distribution: Eastern Australia
Colour/Appearance: The timber's appearance ranges from reddish to dark brown. Sapwood is pale yellow. A very dense, hard, fine grained timber, difficult to work, but polishes to a high sheen.

Common Name: Australian Red Gum
Scientific Name: Eucalyptus camaldulensis
Distribution: Eastern Australia
Colour/Appearance: The hallmark of river red gum timber is its distinctive red appearance. The heartwood is red to reddish brown in colour with the timber's texture having some coarseness.

Common Name: Australian Spotted Gum
Scientific Name: Corymbia maculata, Corymbia citriodora and Corymbia henrii
Distribution: Eastern Australia
Colour/Appearance: The heartwood ranges from light brown through to dark reddish brown hues. Sapwood is usually white to light brown in colour.

Common Name: Vic Ash (Mountain Ash)
Scientific Name: Eucalyptus regnans or Eucalyptus delegatensis
Distribution: Victoria (alpine), Tasmania
Colour/Appearance: Victorian ash timber can range from a pale pink to pale yellow or brownish colour.

Common Name: Australian Wormy Chestnut
Scientific Name: *Eucalyptus obliqua*, *Eucalyptus sieberi* and *Eucalyptus fastigata*
Distribution: Victoria, southern New South Wales, and Tasmania
Colour/Appearance: The character of the timber shows gum pockets and veins as a result of exposure to fire and a harsh climate. Colour ranges from mellow straw blonde or light brown tones.

Common Name: Australian Yellow Box
Scientific Name: *Eucalyptus melliodora*
Distribution: Eastern Australia
Colour/Appearance: Heartwood ranges from light pink to golden brown. Pale grey sapwood. Commonly seen in burl form.

Common Name: Californian Black Walnut
Scientific Name: *Juglans hindsii*
Distribution: California & Oregon
Colour/Appearance: Heartwood can range from pale brown to dark chocolate brown, with dark brown streaks.

Common Name: American White Oak
Scientific Name: *Quercus alba*
Distribution: Eastern United States
Colour/Appearance: Colour can be highly variable, from medium golden to reddish brown, similar to Koa or Mahogany. There are usually contrasting bands of colour in the growth rings, and it is not uncommon to see boards with ribbon like streaks of colour.

Common Name: European Oak
Scientific Name: *Quercus robur*
Distribution: Western Europe
Colour/Appearance: The wood is characterised by its distinct (often wide) dark and light brown growth rings. Colour appears as yellow to light brown.
